Scala Parser Combinators

Alexander Daniel • @lachdrache • http://lachdrache.wordpress.com

```
class PlusMinusParser extends JavaTokenParsers {

  def expr: Parser[Int] = targetActual <~ comment

  def targetActual: Parser[Int] = duration ~ duration ^^ { case target~actual => actual-target }
  def comment: Parser[String] = """.*""".r

  def duration: Parser[Int] = day | hourMinute

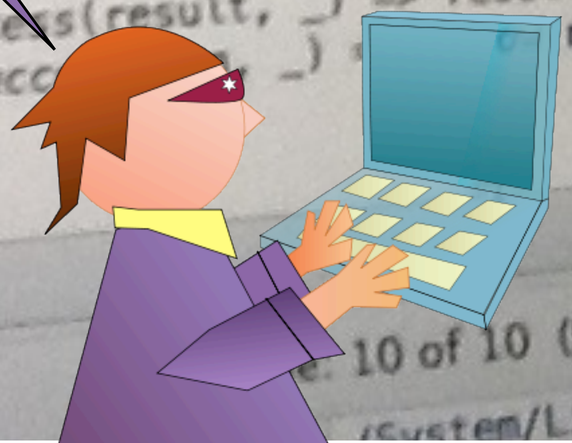
  def day: Parser[Int] = num<~"d" ^^ { days => days*MinutesPerDay}
  def hourMinute: Parser[Int] = hour~minute ^^ { case h~m => h*60 + m }
  def hour: Parser[Int] = num<~"h"
  def minute: Parser[Int] = num<~"m"

  def num = wholeNumber ^^ { _.toInt }

  def test = 7*60 + 42

  def apply(input :String):Int = parseAll(expr, input) match {
    case Success(result, _) => result
    case NoSuccess(msg, _) => throw new RuntimeException(msg)
  }
}
```

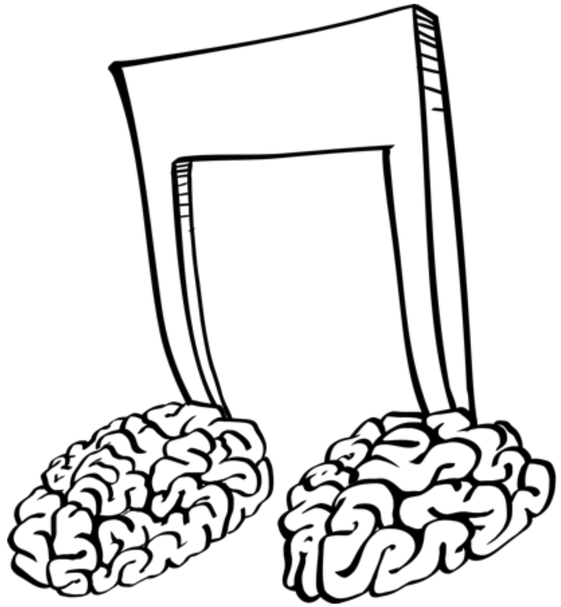
Slides are boring... Show me the code!!!

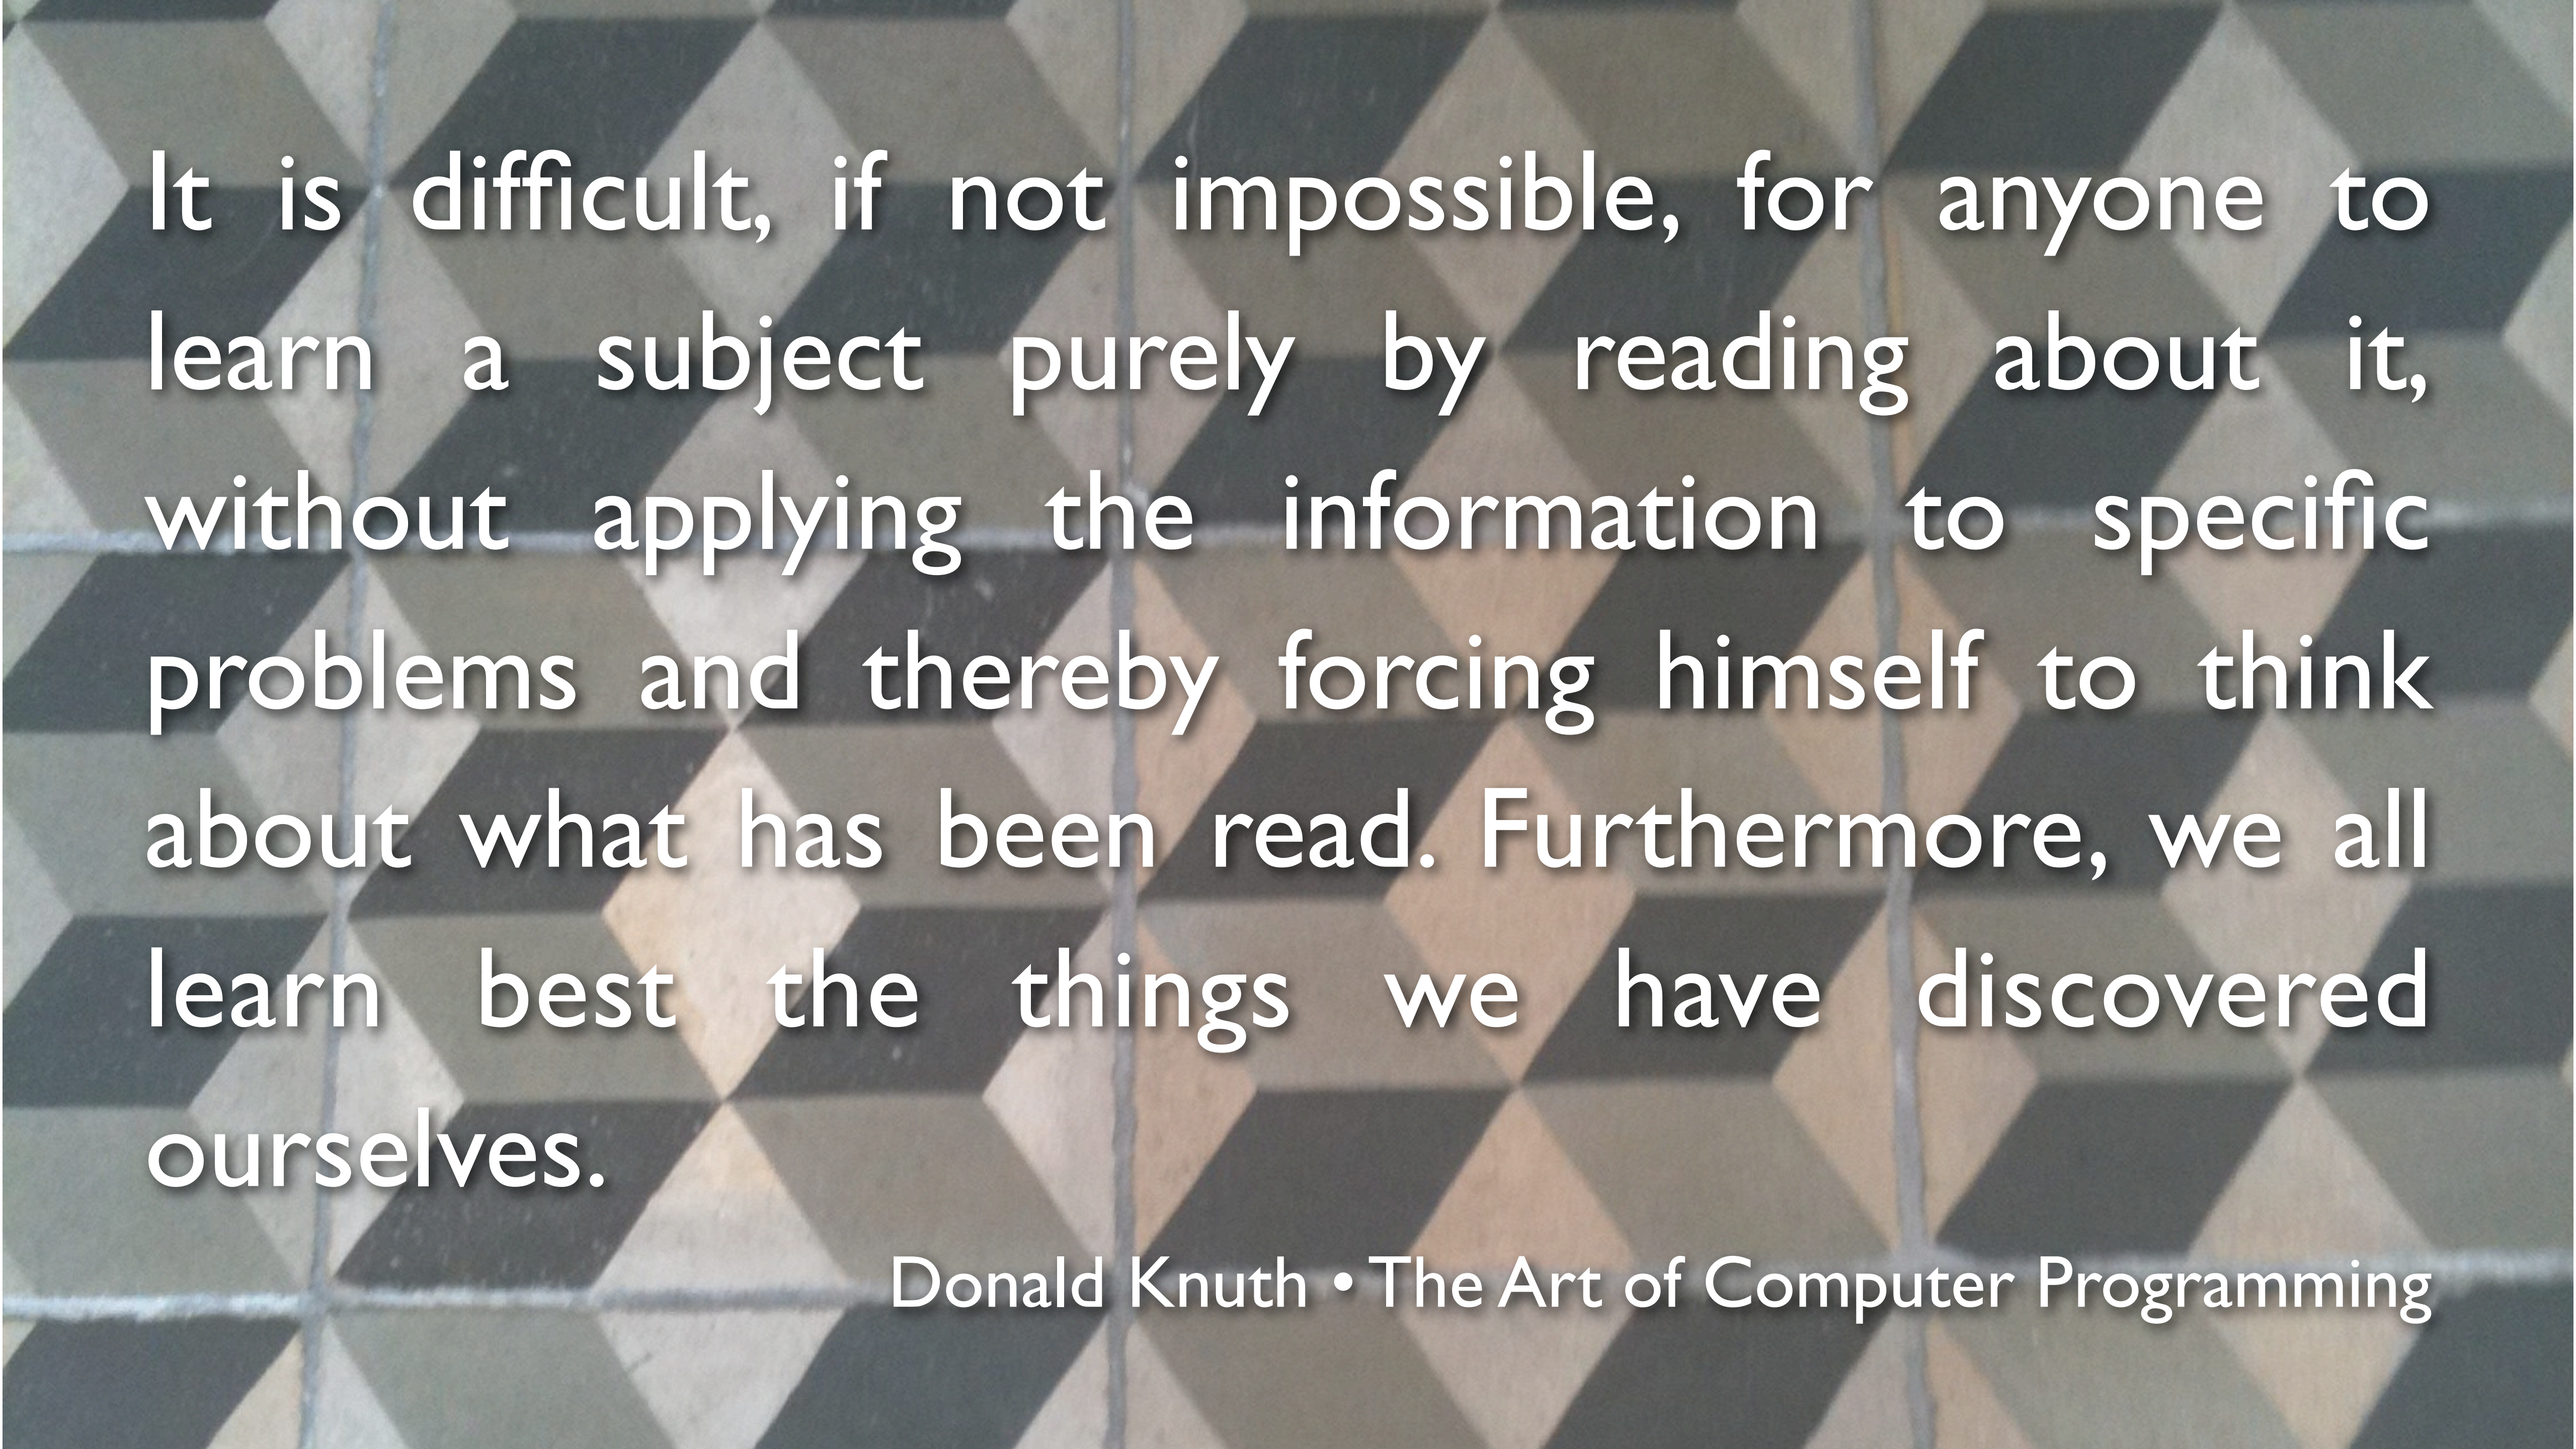


10 of 10 (9.84 s)

/System/Library/Java/JavaVirtualMachines/1.6.0.jdk/Contents/Home/bin/java -Dic

- Easy to learn and use
- Good example of an internal Scala DSL
- Great extensibility and maintainability
- Suitable for parsing small to medium sized input





It is difficult, if not impossible, for anyone to learn a subject purely by reading about it, without applying the information to specific problems and thereby forcing himself to think about what has been read. Furthermore, we all learn best the things we have discovered ourselves.
Donald Knuth • The Art of Computer Programming
